

## PyCitySchools Written Analysis

In summary, the data shows significant variations in overall grade scores based on school size and type. Small schools with fewer than 1000 students had the highest passing rate at 90.13%, while large schools with 2000-5000 students had the lowest passing rate at 56.57%. Charter schools outperformed District schools, with a 90.56% overall passing rate compared to District schools' 53.69%.

In terms of subject-specific performance, students' passing rates in reading and math remained relatively stable, averaging between 70-80% for both school types. However, District schools had the lowest percentage of students passing math at 66.51%. Overall, these findings highlight the influence of school size and type on academic performance, with smaller schools and Charter schools generally achieving higher passing rates.
